Getting started

Sync, share and back up your files — on every device.

PowerFolder lets you share folders across all your desktop and mobile devices — one easy way to sync, share and back up your files.

Desktop client
Monitors folders on your computer and syncs every change to the server and your other computers.

Web interface
Access your files from any web browser and share files or folders with others.

Mobile apps
Connect to your folders and take the files you need with you, wherever you go.

Is it useful for me?

Many people still exchange data via network drives, USB sticks, e-mails with large attachments or upload forms. With PowerFolder you can leave all of that behind: transfer data securely over the internet and work more productively as a team.

Sync your first folder

After your first login, PowerFolder creates a folder called **PowerFolders** in your user profile. From there you are only a few clicks away from sharing or backing up your files.

1. Create a new folder inside **PowerFolders**.
2. Drag and drop some files into that new folder.

> **Done** That's it! The folder and its contents are now synchronized to the server. All future changes sync automatically, and the folder is ready to be shared with others.

Three ways to work with PowerFolder

1 · The PowerFolders folder

When PowerFolder starts for the first time, it creates the **PowerFolders** folder on your hard drive. It works like any other folder — but the desktop client automatically detects new folders and files in it. Whatever you move into one of these folders also appears in the same folder on the web and on your other computers. No manual copying or uploading anymore.

2 · The desktop client

Log in with your user name and password. The client then shows the overall status of your folders, plus a list of every folder it manages and the status of each:

In sync	All your folders are fully synchronized.
Syncing	PowerFolder is currently transferring changes.
Waiting	PowerFolder waits to sync your folders, for example for a connection to the server.
Attention needed	Common reasons: you are not logged in yet, your hard drive is full or your storage quota is exceeded.
Paused	Synchronization has been paused.

3 · The system tray / menu bar icon

The tray icon (Windows) or menu bar icon (macOS) shows the same status icons as the client, so you can check the synchronization at a glance. Right-click it to:

- open the desktop client,
- open your PowerFolders folder on your hard drive,
- go to your folders on the web interface,
- see the latest changes,
- change preferences,
- exit the desktop client.

Share files with other people

PowerFolder offers two ways of sharing:

- **Links** — quickly share files and folders for download.
- **Invitations** — let others synchronize your folders with their own desktop client.

Share a file or folder via link

1. Log in to the web interface and click **Folders**.
2. Open a folder or browse inside it.
3. Click the **share** icon next to the folder or file.
4. Click **Copy link to clipboard** to paste it anywhere, or **Share link** to send it by e-mail.

> **Tip** To stop sharing, click **Links** in the main menu and remove the link from the list.

Invite others to synchronize a folder

1. Log in to the web interface and click **Folders**.
2. Click the **invitation** icon next to a folder.
3. Enter the e-mail address of the person to invite, choose the permission and click **Add**.

> **Tip** In the same place you can also manage existing members of your folder and their permissions.

Frequently asked questions

How long until my files are fully synced?

PowerFolder transfers as fast as your network allows, while doing its best not to interfere with your normal work.

How could PowerFolder sync my files so quickly?

If a file has changed, PowerFolder transfers only the changed parts instead of the whole file. Files that are already known to the server don't need to be uploaded again.

How secure is PowerFolder?

Security is our top priority. All transfers are encrypted, and the web interface is secured with TLS — the same standards used to protect online banking.

Can I use PowerFolder on my mobile device?

Yes. The web interface works in your mobile browser, and free native apps are available for Android, iPhone and iPad — just search for **PowerFolder** in your app store.
